WORK EXPERIENCE

| | | | |
|--|-----------|---------------------------------|--|
| TwinStrand Biosciences | 2021– | Bioinformatics Scientist II | Performed analyses on duplex sequencing data for many projects including mutagenesis and cancer MRD. Contributed R code to internal bioinformatic pipelines and customer-facing reports. Presented findings to commercial and academic clients. Performed code reviews of R packages. Reference: Evan Henrich · evan.henrich@gmail.com |
| | 2014–2020 | Postdoc, Bioinformatics Analyst | Coordinated projects among PhD-level analysts, led brainstorming sessions and journal clubs. Performed analyses on flow cytometry and transcriptomic datasets. Created data analysis pipelines & interactive data visualizations. Authored Statistical Analysis Plans & peer-reviewed manuscripts. Reviewed junior analysts' code, mentored PhD students and bench scientists on statistics. Developed R code to normalize mass cytometry data across experiments using multi-mixture models. Performed dimension reduction on mass cytometry data and identified correlates of disease using regression. Reference: Amy Paguirigan, PhD · apaguiriri@fredhutch.org |
| Fred Hutchinson Cancer Research Center | 2009–2014 | Doctoral Student | Designed and built a patented high-dynamic-range protein gel imager with robotic gel cutting arm for capturing rare proteins. Developed SIGILab , a C++ GUI application controlling gel imager's acquisition of high-dynamic-range images. Developed bash scripts to quantify protein abundances in 2DE gel images. Lectured in Modern Biology course and mentored junior students. Reference: Jonathan Minden, PhD · minden@cmu.edu |
| | 2006–2009 | Research Associate | Identified factors that affect peptide detectability in mass spectrometry experiments using R. Constructed a SQLServer database with web frontend for exploring mass spectrometry data and planning proteomic experiments. Developed a weighted regression algorithm in R to predict regulators of stress response in microarray data. Reference: Serdar Turkarslan, PhD · serdar.turkarslan@isbscience.org |
| Carnegie Mellon University | | | |
| Institute for Systems Biology | | | |

TECHNICAL SKILLS

| | |
|-------------------------------|---|
| Programming | R, Python, Matlab, C/C++, bash, JavaScript, Perl |
| Data Analysis / Statistics | dimension reduction, clustering, regression/classification, linear models, variable selection, hypothesis testing |
| Databases | MySQL/MariaDB, PostgreSQL, SQLServer |
| Workflows | Nextflow, WDL, Slurm, Docker, GitHub |
| Bioinformatics | STAR, RSEM, BLAST, SAMtools/BCFtools, DEG, GSEA, KEGG, STRING |

EDUCATION

2009-2014 Carnegie Mellon University

PhD, Biological Sciences

2001-2007 University of Washington

BS, Biology (Physiology specialization); BS, Wildlife Sciences

SELECTED PUBLICATIONS & PATENTS

complete list: <https://scholar.google.com/citations?user=IDadFEkAAAAJ>

- J. of Clin. Invest.* Jun. 2021 Monocyte metabolic transcriptional programs associate with resistance to tuberculin skin test/interferon- release assay conversion
This manuscript reports a potential link between oleic metabolism and *Tuberculosis* resistance in humans. As the primary analyst on the project, I aligned the raw transcriptomic data to the genome, quantified gene expression, created data visualizations and made recommendations on statistical/machine learning methods. I also assisted in writing the manuscript.
Authors: Jason Simmons, PHU T. VAN, *et al.*
- Bioinformatics* Nov. 2018 **ggCyto: next generation open-source visualization software for cytometry**
This R package enables plotting of high-dimensional flow cytometry and mass cytometry data in the grammar-of-graphics style. I contributed to the R codebase, performed testing and co-wrote the manuscript.
Authors: PHU T. VAN*, Wenxing Jiang*, Raphael Gottardo, Greg Finak (*co-first authors)
- Electrophoresis* Sep. 2014 **High dynamic range proteome imaging with the structured illumination gel imager**
I built the Structured Illumination Gel Imager (SIGI), which enabled a 1000-fold increase in dynamic range over then-current methods while imaging 2D electrophoretic gels. I wrote the prototype imager software in Matlab, the production software in C/C++ and this manuscript, which informed the subsequent patent application for the imager.
Authors: PHU T. VAN, Victor Bass, Dan Shiwarski, Frederick Lanni, Jonathan Minden
- Molecular Systems Biology* Nov. 2010 **Coordination of frontline defense mechanisms under severe oxidative stress**
This manuscript reports a previously-undiscovered gene network that regulates cellular response to oxidative stress in microbes. I analyzed microarray data, wrote the R code for predicting the gene network, and co-wrote the manuscript.
Authors: Amardeep Kaur, PHU T. VAN, *et al.*
- United States Patent* Jul. 2019 **US10362237: Structured illumination system for increased dynamic range in quantitative imaging**
"The systems disclosed herein employ an iterative image collection strategy that utilizes structured illumination to achieve greater than 1,000,000-fold dynamic range measurements, representing a dramatic improvement over the prior art."
Inventors: Jonathan Minden, Frederick Lanni, PHU T. VAN
