WORK EXPERIENCE

TwinStrand Biosciences	2021/11–	Bioinformatics Solutions Manager	Served as bioinformatics expert for the company in approving new projects. Provided bioinformatics guidance to Laboratory Sciences, Custom Applications, and Field&Technical Support departments, as well as external clients. Hired, trained and supervised analysts for newly-created Bioinformatics Solutions department. Reviewed company marketing and training materials for technical accuracy. Initiated and later supervised data analyses that expanded DuplexSeq(TM) support to two new sequencing platforms. Reference: Clint Valentine III, MS · clint@twinstrandbio.com
	2021/01-10	Bioinformatics Scientist II	Performed analyses on duplex sequencing data for numerous mutagenesis and cancer diagnostic projects. Reviewed and contributed R code to internal bioinformatic pipelines and customer-facing reports. Prepared data products and presented findings to industry and academic clients. Reference: Fang Yin Lo, PhD · mailto:fangyinlo@gmail.com
Fred Hutchinson Cancer Research Center	2014–2020	Postdoc → Bioinformatics Analyst	Coordinated projects among PhD-level analysts, led brainstorming sessions and journal clubs. Performed analyses on flow cytometry and transcriptomic datasets. Created data analysis pipelines & interactive data visualizations. Authored Statistical Analysis Plans & peer-reviewed manuscripts. Reviewed junior analysts' code, mentored PhD students and bench scientists on statistics. Developed R code to normalize mass cytometry data across experiments using multi-mixture models. Performed dimension reduction on mass cytometry data and identified correlates of disease using regression. Reference: Amy Paguirigan, PhD · apaguiri@fredhutch.org
	2009-2014	Doctoral Student	Designed and built a patented high-dynamic-range protein gel imager with robotic gel cutting arm for capturing rare proteins. Developed SIGILab , a C++ GUI application controlling gel imager's acquisition of high-dynamic-range images. Developed bash scripts to quantify protein abundances in 2DE gel images. Lectured in Modern Biology course and mentored junior students. Reference: Jonathan Minden, PhD · minden@cmu.edu
Carnegie Mellon University			

TECHNICAL SKILLS

Programming	R, Python, Matlab, C/C++, bash, JavaScript, Perl
Data Analysis / Statistics	dimension reduction, clustering, regression/classification, linear models, variable selection, hypothesis testing
Databases	MySQL/MariaDB, PostgreSQL, SQLServer
Workflows	Nextflow, Slurm, Docker, GitHub
Bioinformatics	STAR, RSEM, BLAST, SAMtools/BCFtools, DEG, GSEA, KEGG, STRING

EDUCATION

2009-2014 Carnegie Mellon University

PhD, Biological Sciences

2001-2007 University of Washington

BS, Biology (Physiology specialization); BS, Wildlife Sciences

SELECTED PUBLICATIONS & PATENTS

complete list: <https://scholar.google.com/citations?user=IDadFEkAAAAJ>

- Journal of Clinical Investigations* Jun. 2021 **Monocyte metabolic transcriptional programs associate with resistance to tuberculin skin test/interferon- release assay conversion**
This manuscript reports a potential link between oleic metabolism and *Tuberculosis* resistance in humans. As the primary analyst on the project, I aligned the raw transcriptomic data to the genome, quantified gene expression, created data visualizations and made recommendations on downstream statistical/machine learning methods. I also wrote the computational parts of the manuscript.
Authors: Jason Simmons, PHU T. VAN, *et al.*
- Bioinformatics* Nov. 2018 **ggCyto: next generation open-source visualization software for cytometry**
This R package enables plotting of high-dimensional flow cytometry and mass cytometry data in the grammar-of-graphics style. I contributed to the R codebase, performed testing and co-wrote the manuscript.
Authors: PHU T. VAN*, Wenxing Jiang*, Raphael Gottardo, Greg Finak (*co-first authors)
- Electrophoresis* Sep. 2014 **High dynamic range proteome imaging with the structured illumination gel imager**
I built the Structured Illumination Gel Imager (SIGI), which enabled a 1000-fold increase in dynamic range over then-current methods while imaging 2D electrophoretic gels. I wrote the prototype imager software in Matlab, the production software in C/C++ and this manuscript, which informed the subsequent patent application for the imager.
Authors: PHU T. VAN, Victor Bass, Dan Shiwerski, Frederick Lanni, Jonathan Minden
- United States Patent* Jul. 2019 **US10362237: Structured illumination system for increased dynamic range in quantitative imaging**
"The systems disclosed herein employ an iterative image collection strategy that utilizes structured illumination to achieve greater than 1,000,000-fold dynamic range measurements, representing a dramatic improvement over the prior art."
Inventors: Jonathan Minden, Frederick Lanni, PHU T. VAN
